

PROFILE SUMMARY

- Aspiring **Data Scientist and Machine Learning**, pursuing a **Bachelor’s in Computer Science (Graduation: 2026)** with a strong academic foundation.
- Skilled in **Python, SQL, Machine Learning, and Data Analytics**, with hands-on experience building predictive models and interactive dashboards.
- Built full-stack applications and responsive websites using React Native, Tailwind CSS, and modern frontend technologies.
- Experienced in **Salesforce Administration**, specializing in workflow automation using **Salesforce Flows and Lightning Pages**.
- Demonstrated **leadership and research capabilities** through academic projects, surveys, and peer mentorship.
- Actively seeking **2025 internship opportunities** in **Data Science, Machine Learning, Analytics, AI, or Salesforce** domains.

EDUCATION

University Of Mumbai	Navi-Mumbai, Maharashtra, India
Bachelor's in Computer Science (CS); SGPA: 9.40	<i>June 2023- July 2026</i>
Higher Secondary Education	Navi-Mumbai, Maharashtra, India
12 th Science; Percentage: 73%	<i>March 2023</i>
10 th ; Percentage: 84.80%	<i>March 2021</i>

SKILLS

- Programming & Data:** Python, SQL, R(Basic)
- Machine Learning & Analytics:** Supervised Machine Learning (Classification & Regression), Model Training, Evaluation & Validation, Feature Engineering & Data Preprocessing, Predictive Analytics
- Web & Application Development:** React Native, Tailwind CSS, Flask, REST API Integration
- CRM Concepts:** Salesforce Basics
- Soft Skills:** Analytical Thinking, Leadership & Team Collaboration, problem-solving, Communication & Decision Making

EXPERIENCE

Salesforce Administrator :- GSBG Technologies (Internship) 2 months - Present

- Designed and implemented complex Salesforce Flows to automate lead assignment and approval processes.
- Developed custom Lightning Pages using Lightning App Builder to enhance user experience and improve data accessibility for sales representatives.

Web Developer:- ReaEspresso PropTech Pvt. Ltd (Internship) 2 months

- Contributed to the development and optimization of company web pages.
- Demonstrated sincerity, eagerness to learn, and effective task execution.
- Worked closely with the development team in an agile work environment.

PROJECTS

AI-Assisted Rehabilitation: Virtual Assistant for Real-Time Exercise Monitoring

- Built an **AI-powered rehabilitation web platform** using webcam-based pose estimation (MediaPipe) and Random Forest models to classify exercise repetitions with **80–86% accuracy** and provide real-time corrective voice feedback.
- Developed a **full-stack solution** with Flask, OpenCV, SQLite, and dashboards for patients and therapists, enabling automated reports, appointments, and scalable home-based rehabilitation support.

Proactive Student Performance Prediction & Intervention Dashboard(XGBoost, Sreamlit)

- An AI-driven dashboard that predicts student academic performance based on comprehensive data.
- To enable **timely intervention** and **data-driven decision-making** for educators and students.
- Shifts from reactive problem-solving to proactive support.

Text-to-Image Generator (Modular Python Architecture)

- Developed a **modular generative AI application** integrating Stable Diffusion and GPT-2 via Hugging Face, enabling intelligent prompt enhancement, batch image generation, and artistic style control.
- Refactored the system from a Tkinter GUI to a **Streamlit-based web interface**, ensuring clean separation of AI logic and UI, scalability, and production-ready model management.

CardioHealth Risk Predictor Pro – ML Web Application

- Built a **full-stack cardiovascular risk prediction system** using data preprocessing, scaling, and a production-ready Random Forest model for single and bulk predictions.
- Implemented advanced features including a **“What-If” risk analysis tool**, interactive visualizations, and geospatial resource mapping using Python, scikit-learn, Matplotlib, and Streamlit.

GSBG | Salesforce Partners:- Official Company Website (gsbg.in)

- Designed and developed the official GSBG company website from scratch, handling both front-end and back-end development.
- Managed the full process, from concept to deployment on a live hosting environment.

REASEARCH & PUBLICATIONS

- Consumer Sentiment Insights on Smart Ring Using Supervised Classifiers: A Comparative Study**
Co-authored a research paper analysing consumer sentiment using supervised machine learning models; conducted comparative evaluation of classifiers on real-world data and presented findings at the **National Conference on Robotics & AI (March 2025)**.
